

Sample Questionnaire

This questionnaire is designed to assess the prevalence and determinants of FGM among women in selected communities.

Section A: Demographics

Age, Marital Status, Educational Level, Occupation, Religion, Place of Residence (Urban/Rural).

Section B: Knowledge

1. FGM has health risks. (Strongly Agree / Agree / Disagree / Strongly Disagree)
2. FGM can cause complications in childbirth.
3. FGM increases risk of infection.
4. FGM is required by religion.
5. FGM is a harmful cultural practice.

Section C: Perceptions

6. FGM makes a woman more acceptable for marriage.
7. Women without FGM face discrimination.
8. Families benefit socially from circumcising daughters.
9. Abandoning FGM would harm tradition.
10. Communities should abandon FGM.

Section D: Experiences and Coping

11. Have you personally undergone FGM? (Yes/No)
12. Would you allow your daughter to undergo FGM? (Yes/No)
13. Families pressure women to undergo FGM.
14. Women use social support networks to cope with FGM trauma.
15. Government and NGOs play a role in ending FGM.
